

To move files
from one
computer
to another,
nothing's
easier.

Welcome.

Welcome to the way technology should be.

Welcome to Spare Switch,™ the world's easiest way to move files from one computer to another. Just follow these few steps to install the Patent-pending software on your computer. Then let Spare Switch take over. Isn't that the way technology should be?

Download & Installation

From the Web site, begin the download.

Click Run/Open (or, if you select Save, we suggest saving the Installer to your desktop).

Follow the installation instructions on screen.

If prompted, enter your Windows log-on password. This allows Spare Switch to operate even if you're not logged in.

Important: If you are prompted by firewalls or anti-spyware, Spare Switch must be allowed all access to ensure proper function.

Your Spare Identity

If you already have a Spare account, enter that information now.

If you do not already have an account, click Create One Now.

Follow the on screen instructions. (You will not have a code if you purchased via the Web site.)

Record the answers to your security questions, along with the Spare Key code, and keep them in a safe place. You will also receive confirmation of this information via email. We recommend that you delete the email message from your computer upon receipt to keep your Sign In identity secure.

How It Works

Be sure that your computer has an active Internet connection.

Make your selection:

Move From: Click on this arrow to move the files on your existing computer to the secure data holding center.

Move To: Click on this arrow after your files have been moved from your old computer to transfer them to a different computer.

If you are moving data from your existing computer, Spare Switch will begin automatically to locate files as well as the personality settings associated with them. This operation normally takes just minutes. When completed, you will be presented with an inventory of files, organized by common software products, and a plan for moving them. To review file details, including the estimated space and time it will take to move your files, or to make a change to the moving plan, use the drop down arrows.

Once the plan is approved, be sure to leave your computer on so that Spare Switch can move files using your high-speed Internet connection.

Moving files to a new computer is just as easy. First, install the Spare Switch software as instructed above. Rather than creating a new account, however, just sign-in to your existing account. Then select Move To. As long as the computer you're moving files to has an active high-speed Internet connection, Spare Switch will begin transferring files immediately.
